

Environmental Policy

Environmental Impact Top Priority

Offshore Marine Management recognises and accepts that concern for the environment is an integral and fundamental part of the Company's corporate business strategy.

The Company will actively control and monitor the effects of its manufacturing activities on the environment and will strive for a continual improvement in its environmental performance through a series of proactive policies.

The Environmental Management System, based upon the requirements of BS EN ISO 14001: 1996, has been designed to implement these policies.

Particular attention is paid to the following:

- Environmental Protection Act 1990
- Water Resources Act 1991
- Wildlife and Country Act 1981
- The control of Pollution (Special Waste) Regulations
- Local environmental regulations applicable to the area of operations.

Consideration will be given to the environmental impact of all projects throughout their life cycle. The Company will conduct all of its activities in such a way so as to minimise any potential adverse effects of its operations on the environment and to minimise disturbance of the environment.

Maintaining Natural Resources, Managing Waste and Reducing Energy-use

The Company will minimise, wherever possible, the use of natural resources and will adopt a strict Waste Management Policy to reduce, reuse or recycle waste that is produced and arrange for the disposal of other waste in a responsible manner.

The Company will maintain an Energy Management Policy to prevent energy wastage and encourage more appropriate use of energy.

Offshore Marine Management Environmental System ensures that the Company shall:

- Establish and maintain auditable, environmentally sound working procedures and practices throughout its operations.
- Prevent damage to protected wildlife species and habitats.
- Store and use oil, fuels and chemicals to minimum standards that comply with the Environmental Agencies Pollution guidelines.
- Avoid noise emissions that could create a Statutory Nuisance.
- Maintain all plant and equipment in a safe and environmentally sound condition.
- Provide any available environmental information on the contracted operations/services, at the request of the nominated representative.

Offshore Marine Staff and the Environment

The Company will provide staff training so that all are adequately trained to fulfil their roles within the Environmental Management System. Staff will be reminded of the objectives of the organisation with respect to the environment.

Offshore Marine Management will report to the nominated representative immediately if any environmental complaints are received from the public or from any other regulatory authority, including any spillage of oil, fuel or chemicals that could pollute controlled waters (i.e. groundwater), and ensure that any spillage, however minor, is cleaned up as soon as possible in an approved/recognised manner.

The Company is committed to a process of continual improvement and will periodically review the Environmental Management System and refine it wherever necessary.

This statement will be brought to the attention of all employees, suppliers, contractors, regulatory authorities and customers.

Copies of our environmental policy are freely available to download via our website and are also available on request.

The policy has been reviewed, formalised and endorsed by the Company's managing director, who will take responsibility for its execution.

R.L.D. Grimond
