

OPERATIONS & MAINTENANCE SERVICES FOR SAUDI ARAMCO

Offshore Marine Management's sister company, CAOMM, is delivering cable fault detection and repair services in the Middle East

Saudi Aramco contracted CAOMM for delivery of the following services across various sites:

- ▶ Cable repair readiness study
- ▶ Project management
- ▶ 24hr technical support line
- ▶ Subsea cable and umbilical repair procedures
- ▶ Fault detection and diagnosis
- ▶ Emergency action response
- ▶ Mobilisation of repair spread and team
- ▶ Repair operations, testing and re-protection of cable
- ▶ Deliver training courses to employees on subsea cables and fault finding processes

CAOMM, part of the Offshore Marine Group, was awarded a contract to provide Saudi Aramco, the world's leading integrated energy and petrochemicals enterprise, with a submarine cable repair readiness study and a three year Cable Fault Detection Repair (CFDR) program.

The submarine cable readiness study was conducted at various Saudi Aramco sites across the Kingdom of Saudi Arabia to ensure that, in the event of a cable fault, Saudi Aramco is prepared to rapidly respond and repair the cable fault efficiently and in a cost effective manner.

The CFDR program was designed to ensure that any cable faults that do arise are quickly located, isolated and repaired by CAOMM in order to minimize the downtime and mitigate any impact to offshore production.
